P R E F A C E

IN these few pages I have attempted to describe all the Oxford silver pennies that are known to me, with a view to illustrating the general character of the local currency down to the end of the reign of Henry the Third. Not that our Oxford money was in any way remarkable. On the contrary, it merely stood side by side with the other provincial issues, helping to complete the national currency. For that reason it may seem to some of my readers that the attention here given to it is more than is necessary. But I think they will see that it is difficult to treat the subject at all if not fully. A few short lists of types and names, with references to works which many do not possess or have no time to consult, might have been sufficient, but they would have been meaningless to most members of the O. H. S., especially if there had been no illustrations. The Oxford mint is considered by some to be a rare one, and it was this fact that led me originally to take note of such pennies as occurred from time to time. The result shows the mint to have had a very much larger issue than was thought, and as no year seems to pass without fresh material coming to light, I use the word 'illustrate' advisedly. Probably most of the 'types' are represented here, but the book would never have appeared if it had been decided to delay it until all the different pennies of each type were included. We cannot tell, of course, what finality there may be in such a case, but the book is sufficient to illustrate the series, and as an attempt to do this somewhat fully I hope it will be regarded with leniency.

In reality the study of a local mint is not without interest. The history of Oxford before the Conquest happens to be dim, and this is one of many subjects to be pursued before we can form a general idea of the daily life of her burgesses in those early days. The mere gathering together of the moneymen's handiwork gives us a definite body of evidence, which points

to trade and order during long lapses of time under the careful eye of a central government. The continuity of local life in our national history asserts itself in no uncertain manner. The same moneyers, the same style and standard of penny, will be found in the reigns of Æthelræd and Cnut; no startling change can be noticed after the accession of William I. This may be quite obvious, but we are always forgetting it. Then, again, 'the growth and development of the central administration is clearly reflected in the coinage. From the reign of the Confessor downwards there is a regular decrease in the number of mint towns and moneyers. The former are steadily reduced to the more important towns and centres of trade, and the diminution in the number of the latter doubtless is of the same character¹.' This process of survival helps us to estimate the importance of our own city, which can also be gauged by comparing the results obtained in this book with the work of other mints. Here we must not forget that an historian boasted, that at the earliest moment 'when its academic history can be said to open, at the arrival of the legist Vacarius in the reign of Stephen, Oxford stood in the first rank of English Municipalities.' We are also led of necessity to inquire into that central system and to admire the cleverness of the bonds between central and local administration, which is the basis of constitutional government. This seems to me to be particularly noticeable in the English monetary system, and it enables us to understand under what conditions our Oxford moneyers worked. Another result of gathering these pennies together is that we are provided with a valuable list of personal names, many of which cannot be obtained from contemporary documents. It will be possible to produce evidence as to the status of some of these men, and to show that most of them were without doubt leading citizens of their time. Lastly, there is the romantic side of the question. Oxford pennies have been scattered far and wide, thrown up by the sea on the Isle of Skye, found in Ireland, unearthed in Rome, frequently discovered in Gotland or on the shores of the Baltic. Even at home they have been grubbed up by children,

¹ 'The Coinage as affected by the administration of Henry II,' by A. E. Packe, 1895, *Num. Chron.*, Vol. XV, p. 55.

clenched triumphantly in little fists, and thrown about as buttons. It is not the least interesting part of the business to wonder how they got where they were found, or what their wanderings may mean. In fact the subject is not intensely dull. Pennies merely stared at tell you nothing, but taken with a wide range of other subjects and treated sympathetically they can break silence and prove quite interesting. I propose, then, briefly to touch upon such points as may be likely to occur to my readers, at the same time avoiding any lengthy inquiry such as would concern the national coinage rather than the local mint.

First, then, as to the practice of prefacing numismatic books with a summary of contemporary history. In this case it would add largely to the size of the volume owing to the length of time covered, and also it would result in a great deal of unnecessary repetition. The *Early History of Oxford* has already been issued by the Oxford Historical Society. Briefly, antiquarian fancies and mythical history do not concern us. The earliest period to which we need look back is that of King Æthelred I and Ælfred his brother. During the Viking incursions we have no evidence that Oxford was in any way affected, and the peace of Wedmore divided the country in such a way that the city was well within the district assigned to West-Saxon rule. There are doubts and possibilities here, however, that prove interesting when we come to discuss some of the early Oxford pennies. In the succeeding reign, that of Eadward the Elder, Oxford is mentioned for the first time. We learn from the Chronicle that in A. D. 912 died Æthelred, Ealdorman of the Mercians, and King Eadward took possession of London and of Oxnaford and of all the lands which owed obedience thereto. This closes probably a chapter of Oxford history, at the beginning of which the city had enjoyed the position of a Mercian border-town. So that the reign of Æthelstan, in which our series of pennies begins, finds Oxford merged in the West-Saxon kingdom, which had been developing into the kingdom of England.

From this reign, then, and onwards we will try to consider the relative importance of Oxford as one of the mint-towns.

Very little information can be got from existing documents it is true, but there are other methods by which we can arrive at a fairly safe opinion. The first piece of evidence is merely negative, and consists of a list in the Laws of King Æthelstan:—

‘In Canterbury VII. moneyers; IV. the king’s, and II. the bishop’s, I. the abbot’s.

At Rochester III.; II. the king’s, and I. the bishop’s.

At London VIII.

At Winchester VI.

At Lewes II.

At Hastings I.

Another at Chichester;

At Hampton II.

At Wareham II.

At Exeter II.

At Shaftesbury II.

Else, at the other burgs I.’¹

Oxford is not mentioned by name, and is reckoned among the ‘other burgs,’ with *one* moneyer. Here a difficulty arises at once. If the Æthelstan pennies included in this book are rightly attributed to Oxford, then there are eight moneyers, seven of whom are mentioned on pages 1 and 3, and the eighth in the Additional Notes. There is, it is true, sufficient time for them to have succeeded one another, but at first sight it seems difficult to reconcile these two pieces of evidence. Perhaps the Laws belong to an early part of the reign, and the number of moneyers in Oxford afterwards increased with growing prosperity. In any case it is clear that there were then several mint-towns in England of greater importance than Oxford. A period of much obscurity follows. At present there seem to be no Oxford pennies of Eadwig, a failing which may be remedied by the discovery of hoards, and there is not sufficient material from the other reigns by which to make any useful comparison. This brings us to the reign of Æthelræd II, in whose Laws we read, ‘Et ut monetarii pauciores sint quam antea fuerint; in omni summo portu III, et in omni alio portu sit unus monetarius.’² Here we have no names whatever, and

¹ *Ancient Laws and Institutes of England*, p. 88.

² *Ibid.* p. 129.

the same difficulty arises when we compare the law with the facts. The two earliest types, B. M. Type II, var. *a* and var. *d*, page 14, are struck by one and by three moneyers; but all the other types are struck by more than three, even if such names as Æthelmær and Ælfmær are assumed to be the same. Perhaps these Laws also were issued in the early part of the reign, and some great national event, such as the necessity of buying off the Danish invaders, involved an increase of moneyers. The evidence afforded by the number of Oxford pennies during this reign would appear to show that the city had risen to a more important position. Speculation, however, is not very satisfactory, so we will turn to another method, that of counting the different pennies in Hildebrand's Catalogue of the great National Collection at Stockholm and presenting the results in tabular form. This result may be quite accidental, but as the pennies have come from many finds, they are likely enough to give an average, from which a fair conclusion can be drawn.

	Æthelræd II.	Cnut.	Harold I.	Harthacnut.	Edward Confessor.	Total.
London . .	1003	1010	262	46	196	2517
Lincoln . .	400	386	125	20	114	1045
York . . .	406	443	92	2	77	1020
Winchester	315	211	52	14	36	628
Stanford . .	148	149	57	10	39	403
Thetford . .	151	107	30	4	26	318
Chester . .	99	150	39	6	20	314
Exeter . . .	166	69	17	12	9	273
Canterbury	130	73	29	7	28	267
Norwich . .	110	99	26	4	21	260
Oxford . . .	61	58	26	11	21	177
Cambridge	80	74	10	2	8	174
Dover . . .	50	68	16	4	7	145
Lewes . . .	73	33	7	2	9	124

The totals for other towns are: Hampton 117, Wallingford 112, Ipswich 105, Gloucester 102, Hereford 100, Bath 97, Ilchester 97, Colchester 95, Huntingdon 92, Shaftesbury 76, Hastings 56, Chichester 55, Rochester 55, and Wareham 46. I leave out the various smaller or occasional mint-towns, and also take this opportunity of noting that the Edward the

Confessor pennies mostly belong to the first half of his reign. From this table it would appear that Oxford stood among the first dozen of English cities or at least not very far outside. Obviously the country had very much changed since the days of Æthelstan. Rochester is now low down in the list, whilst Lewes, Hampton, and Shaftesbury have all declined. Interesting too it is to observe how entirely the Stockholm pennies come from the eastern part of England, London, Lincoln, and York, showing the direction of trade and wealth, though Winchester still holds a foremost place. At the risk of being tedious I add yet another table showing the actual number of pennies in two great hoards, found in England, covering the reigns of Henry II–III. It will be noticed that the Colchester hoard was nearly twice the size of the Eccles hoard, yet the proportion of pennies in the latter is much the same.

	Eccles Hoard.	Colchester Hoard.
London	2,643	5,096
Canterbury	2,278	4,122
St. Edmundsbury	212	457
Winchester	142	247
York	96	153
Lincoln	58	100
Northampton }	105	{ 67
Norwich }		
Exeter	19	48
Chichester	31	34
Ipswich	18	34
Carlisle	15	21
Durham	22	21
Oxford	13	21

On the whole this seems to confirm the opinion formed previously. Oxford still holds the position it held before the Conquest, that is to say, if not within the first dozen cities it does not stand very far outside. But this last method is more uncertain, for it includes all the pennies struck from the same dies, whereas the previous table included only one penny from each die. And there we will leave it.

What, next, can be said about the position of the moneyer? The early law, that no man mint except within port, suggests that he must have been a local man. But this has been

challenged, owing to the fact that certain moneyers' names are found at the same time in a large number of mint-towns. Hence the suggestion that they may have been itinerant officials, halting here and there to provide the needs of the district, or perhaps have been in attendance on the King during his travels. The last suggestion is overruled by the fact that local moneyers were obliged by custom to strike for the King during his residence, so that he really had no need for moneyers among his attendants. And as to the former it is well to remember that early English names, such as Ælfwine, Godwine, Leofwine, or Wulfwine, were exceedingly common. We can realize this by looking at the names through several centuries not only on coins, but among witnesses to land grants. So that it certainly seems unnecessary to suppose that a Godwine at Dover, Lincoln, Exeter, or Gloucester, might be one and the same person. Such an arrangement would be quite inconsistent with the system of local control imposed by the central government, for, as we shall see later, the placing of a well-known local name on the reverse, together with the name of the mint-town, was intended as a guarantee of goodness and as a means of checking irregularities. It can be proved without difficulty that our moneyers were local citizens, and we may take it for granted that the pennies described in this book were actually struck within the city, as required by law.

How then did the moneyer stand as regards the State? The severity of the Anglo-Saxon laws has given rise to an idea that he was an obscure person of mean birth, at best a rogue. It is true that Æthelstan's Laws say 'that there be one money over all the King's dominion, and that no man mint except within port. And if the moneyer be guilty, let the hand be struck off with which he wrought that offence, and be set up on the money-smithy; but if it be an accusation, and he is willing to clear himself, then let him go to the hot-iron, and clear the hand therewith with which he is charged that fraud to have wrought¹,' and so on. And there are also later tales of moneyers being summoned to Winchester and horribly mutilated. The latter are mere tales, and

¹ *Ancient Laws and Institutes of England*, p. 88.

the Laws are in accordance with the spirit of the time ; giving like treatment to other offenders. They do not justify us in hastily assuming that a moneyer was so insignificant a person that he could be treated with tyrannical severity, as one outside the law. The truth is he was not only a worthy citizen, but he was also to a certain extent a royal officer as much as the reeve or the sheriff. He was legislated for and protected in many ways. First by drastic laws against false coiners. Thus in the Laws of King Cnut, ‘and who after this shall make false, let him forfeit the hands with which he wrought that false, and not redeem them with anything, neither with gold nor with silver¹’. This may perhaps be the meaning of the previous law, but it does not involve any slur on the character of the moneyer proper, and aims at another class of man altogether. A further safeguard consisted in the very English method of giving his superior officers a sound reason for being interested in the excellence of the coinage and so acting as a check on any irregularity. ‘And if any one accuse the reeve, that he [the moneyer] wrought that false by his leave, let him clear himself with a threefold “lād” : and if the “lād” then fail, let him have the same doom as he who wrought the false²’ ; so say the Laws of King Cnut, repeating the Doms of King Æthelræd. Now it is clear that the reeve would have very good reason for seeing that honest Oxford citizens were appointed, and that they had the necessary skill to carry out their business satisfactorily. The reeve himself, if a port-reeve is meant, dealt in the course of the year with many payments, which went to the King through the Sheriff, so that it was important also that he should not make any profit by debasing the currency. From the first our government seems to have fixed on this responsibility of the port or shire officials as a vital part of the business. In the *Dialogus de Scaccario* and elsewhere we can trace the increasing care and severity of the State in later days. The Sheriff had to attend in person at the Exchequer, and his account with the Crown was not settled until his money had been tested. At first the pennies seem to have been paid in by ‘tale’ or *numero*, which requires no explanation, or

¹ *Ancient Laws and Institutes of England*, p. 163.

² *Ibid.*

possibly 'ad scalam,' in which case a presumed deficiency in weight was made good by paying sixpence extra on every counted pound. Neither of these methods, however, gave any indication of weight or fineness. Hence 'ad pensum,' the weighing of 240 pennies against a pound troy, in which sixpence was the allowance for deficiency, beyond which the Sheriff had to make good, or prove his case against the moneyer. Hence also *combustio*, or blanching, by which the money was tested as to fineness. This is described at length in the *Dialogus*, and is summarized in the following:—

'Besides the Sheriff and the Master of Assays with his subordinate, two other Sheriffs, nominated by the Treasurer, were present at the ceremony as witnesses. Together, this party repaired to the furnace, whither the Assayer had preceded them to make the necessary preparations. Arrived there, the coffer containing the trial librate was once more emptied and counted afresh by the expert, the rest standing by and watching his operations. When counted, the coins were thrown into the melting-pot, reduced to a liquid mass, and the dross skimmed off by the Assayer under the critical gaze of the officials and the Sheriffs, each side keen to note, on behalf of its conflicting interests, whether the metal were, on the one hand, insufficiently purified, or, on the other, over-refined by the negligence of the Melter. But, as a rule, the expert caught the pot from the charcoal at the exact juncture prescribed by the rules of his art, and emptied its contents into a vessel; which was carried there by the Master of Assays, accompanied by the rest of the party, before the Barons. If, however, the expert declared the Assay to have failed, or if the experiment were challenged by either party, the whole ceremony was gone through again, with another librate out of the surplus store, the Assayer, however, receiving no fresh fee in this case.

'In the upper Chamber of State, the silver bullion resulting from the Assay was weighed in the scale against a standard pound, and the loss by the fire made up by the Sheriff by throwing in sufficient pence out of the surplus in the Pyx to turn the scale. Thereupon the refined librate was put aside, endorsed with the name of the County to which it appertained.

together with a certificate of the number of pence which had been required to make up the loss by Assay ; whereby it was established how many pence were to be deducted from every pound which the Farm contained before it could be allowed as "blanched," a deduction amounting on an average to five *per cent.* on the whole sum paid in, whether in cash or tallies¹.

Thus it is that in the Pipe Rolls there occur now and again lists of *Combustiones*. For instance, 9 Henry II (A.D. 1162-1163), 'Combust. De Oxenefsc̄, . xxx . § . 7 . vii . d.' ; or, 11 Henry II (A.D. 1164-1165), 'Combust. de Oxenefordsc̄, . xxiii . §.' The Sheriff paid these amounts extra on the total sum he paid into the Exchequer, before his payment was accepted. The description in the *Dialogus*, however, should not be accepted as free from difficulties. No mention, for instance, is made of the alloy, for which proper allowance must have been made.

The subject has only been referred to at length in order to show that an Oxford monetarius was never able to escape the sharp eye of the Exchequer, owing to the careful way in which the money paid in by the Sheriff was tested year by year. His handiwork lay in heaps before the Barons, and his name and the name of his city could be seen at a glance. Further, the system must have given the Sheriff a very close interest in seeing that the currency was kept to standard, and this could only have been done by securing moneyers of integrity and ability. Before leaving this it is only necessary to add that in the event of a moneyer being summoned the Exchequer had in the two processes described above, 'ad pensum' and 'combustio,' the means of dealing with him efficiently. Occasionally this ceremony of Assay would be ordered throughout the country apart from any complaint or accusation, and it survives to this day. An interesting description of an Assay² held in London in the twenty-seventh year of Henry III (1242-1243) shows us the size and importance of the jury and the solemnity of the occasion. This account has a special interest for us,

¹ *Introduction to the Study of the Pipe Rolls*, 1884, pp. 63, 64.

² App. B, Vol. III, *Red Book of the Exchequer*, edited by H. Hall, F.S.A., from MS. Hargrave 313.

for it concludes by giving the officials elected in the various mint-towns, amongst whom are our own :—

OXONIA

- Monetarii — Henricus Simeonis.
 Gaufridus de Stocwille.
 Adam Feteplace.
 Willelmus Sarsorius.
- Custodes — Laurentius Whit.
 Thomas sub Muro.
 Walterus Aurivaber.
 Iohannes Alegod.
- Assaiatores—Radulphus Aurifaber.
 Iohannes le Fleminge.
- Clericus — Simon filius Rogeri.

The duties of the Assaiatores require no further explanation, but the description of the weights or standards used by them is harder to understand. Clearly the necessary weights were sent from London, after the pattern of those officially marked ('quodam quonio impressa') and placed 'in thesauro domini Regis apud Westmonasterium sub sigillo Majoris Londoniae.' Here, again, the later legislation seems to be merely following earlier traditions, for Æthelræd's Laws clearly say: 'Et ipsi qui portus custodiunt, efficiant, per overhirnessam meam, ut omne pondus sit marcatum ad pondus quo pecunia mea recipitur, et eorum singulum signetur, ita quod xv. ore libram faciant. Et custodiant omnes monetam, sicut vos docere praecipio, et omnes elegimus.' The Custodes mentioned above were *custodes cuncorum*, and thus would be additional safeguard against any improper use of the dies by unauthorized persons. Enough has now been said, I think, to show that the moneyer was well advised not to do wrong. He could not by any possibility hope to escape the vigilance of his own citizens, the county officials, and the State; unless indeed general corruption prevailed, as the writer of the *Dialogus de Scaccario* seems to suggest.

Still a few points require investigation. Did the Oxford moneyer make his own dies? It would add very much to the

interest of these pennies, needless to say, if it could be shown that they were the work of local craftsmen. Unfortunately there is hardly any material on which to base an opinion one way or the other. The changes in type show clearly enough that the designs came from a central authority, but the dies differ so much in style that they can hardly have been issued in this manner. Looking closely at the four pennies of the 'Bonnet' type for instance (PL. XI, 2-5), it will be seen that they vary in execution considerably. Much greater uniformity might be expected reasonably from a central engraving department. Such a department, moreover, could not have been a small affair, able to escape notice. On the other hand Domesday, though silent about Oxford, makes a remark about Worcester, which seems to point the other way: 'Quando moneta uertebatur quisque monetarius dabat xx solidos ad lundoniam pro cuneis accipiendis.' A similar statement occurs under Hereford, and we are left to decide for ourselves what it means, whether these two cities are recorded as exceptions, or whether we may take it for granted that all provincial monetarii made like payments. Domesday is evidently the work of many hands, and the absence of information, which may or may not have existed already in London, should not be taken seriously. No doubt all the provincial moneyers paid fees 'ad lundoniam' when a new type was issued, the general fee being apparently twenty shillings. What did they receive in return, dies or merely patterns? Here we will look at the reverse process, namely the return of the dies to London. A copy of a writ, sent to the Oxford moneyers in the reign of King John, still exists, and is well worth reproducing:—

'Rex ꝛc̄ oñibꝫ monetariis ꝛ̄ examinatoribus monete ꝛ̄ custodibꝫ cuneoꝫ Lonđ salť. Precipimus voß qđ sič vos ꝛ̄ ñra diligitis statim visis litt̄is istis signetis sigill̄ ñris oñs cuneos v̄ros ꝛ̄ sitis cum iñ aꝫd Westm̄ a c̄stino S̄ci Dioniš in xv. dies audituri ꝫceptũ ñrum. Et faciatis scire oñibꝫ opatoribꝫ monete de civitate v̄ra ꝛ̄ eis qui sciūt dare cōsilium ad faciendũ monetã qđ tũc sint ibi noßcum ꝛ̄ heatis ibi has litt̄as. T̄. Dño P̄. Wintoñ Êpo aꝫd Westm̄ . vij die Octoß.

'Sub eadem forma scribit oñibꝫ monetariis ꝛ̄ examinatoribꝫ monete ꝛ̄ custodibꝫ cuneoꝫ Wintoñ, Exoñ, Cicestř, Cantuař,

Roffã, Gipeswič, Norwič, Lenň, Linč, Eboráč, Carduř, Norhť, Oxoň, Sçi Edmundř, Dunelň¹.

Does this throw any light on the authorship of the dies? The words are *cuneos vestros*, not *nostros*, as we should expect if they were officially issued from London; and observe that those who can give advice 'ad faciendam monetam' are also required to attend. Perhaps, however, the writ should not be interpreted too strictly; the important point is that the dies were to be returned, probably in order that they might be broken up. Whether this was the rule in earlier times it is impossible to say. The existence of 'mules,' that is to say pennies with the reverse of a new type and the obverse of the preceding type, proves that the moneyer could retain them and even use them in the intervals between new issues, but doubtless it was to his own interest to see that they were destroyed eventually. On the whole these questions remain shrouded in doubt, even if we admit the position claimed for the King's goldsmith in post-Conquest days. He may have made dies in London; but the evidence refers to the very close of the long period under consideration, when the process of centralization was being completed, and we still remain in the dark as to what may have happened before.

Having referred briefly to the conditions and restrictions which were imposed by the State on an Oxford moneyer, there is yet a question or two. Where did he work? Was there a mint in the city, a central building, where all the moneyers kept their tools and coined? It is usual to talk of the Oxford Mint, but this expression really means nothing more than that certain pennies bear the name of the city. There seem to be no references to a building or to any such officer as would be likely to take charge of it. The Laws deal directly with the moneyers, and each one no doubt had his money-smithy in the house that best suited him.

Then, again, why is Oxford called a Royal Mint, as though it differed in any way from others? The phrase results from a great deal of loose writing and guesswork that has been allowed to pass in recent years. Enough has been said to show that the English monetary system had a proper place in

¹ Patent Roll (Chancery) 9 John, m. 5, Record Office.

the administrative system during our period, which of necessity made every mint a royal one. From the time when the Archbishops' names disappeared from the obverse of their silver pennies royal control became complete. There was no such thing as a private mint, except in the lawless times of King Stephen. The Laws of Æthelstan and Edgar lay it down that there be *one* money over all the King's dominion, and those of Æthelræd II say, 'And let no man have a moneyer, except the King.' It is only necessary to look at the pennies in the national collections to see that these laws were observed; for the authority of the King through the Exchequer compelled observance. Looking at the list of mints, which follows the writ of King John, already quoted (p. xviii), it will be noticed that it includes *every* city in England which struck Class III of the short-cross pennies. The names of the four cities, Ilchester, Lichfield, Shrewsbury, and Worcester, which are absent, have never yet been found on that type, though immense numbers of the others have come to light.

This is exactly what we should expect, if in fact all the provincial mints were directly under central control. The confusions which have arisen on this subject are largely due to the supposition that any grant of privilege was so much taken away from the King's authority exercised through his Exchequer. But in the legal system the existence of a local court side by side with a royal one in London made no division of private and public law. And in the monetary system the existence of an earl's or bishop's moneyer side by side with the King's moneyer made no division either, and was quite compatible with the law that all moneyers were the King's. The privilege was partly honorary and partly for convenience, ensuring that these men, connected with vast estates, should have no difficulty in securing the King's currency without delay. They secured, however, no further profit, nor any voice in the system; and even if the King cared to grant away portions of his profit, the integrity of the monetary system was still preserved. Thus Henry I placed one of his moneyers in London regularly at the service of the Abbot of Reading. Ordgar, this London moneyer, struck Type XIV, Hawkins 262, both with and without the scallop-shell on the reverse, showing

that he still remained a royal moneyer, only executing provincial work as required. In the same way a king might place one of his moneyers at Stamford at the service of the Abbot of Peterborough. Abbots or earls who received these privileges had no responsibility for the coinage or influence over it; the moneyer and his work remained royal and subject to the State. Naturally the existence of a mint in any particular district was of great advantage to trade, but it must be remembered that then, as now, money was coined not for amusement but as it was wanted. When the trade of a district declined the mint was taken away, having died a natural death. Consequently these grants were local and not personal. This is quite sufficient to account for the non-appearance of certain types at some mints, even if we do not take into consideration the great extent to which the Exchequer blanched current money and the private individual had it recoined. But we can hardly be certain even now that hoards will not reveal the missing types. I mention this because of the theory lately broached—that the appearance or not of certain types was due to the presence or absence of some important baron. Here the ‘chartered’ mint idea runs wild. It ignores the fact of demand and supply in currency, brushes aside the officials who, as we have seen, were responsible to the Exchequer, and sets up a tyrannical interference entirely inconsistent with the development of our constitutional government, as at present understood. Oxford then may be called a ‘royal’ mint, if you please, but not so as to imply that it differed in any way from the other provincial mints.

It seems unlikely that any profit rewarded an Oxford moneyer. My own view is that the whole of the profits, after payments for services and expenses, belonged to the Crown, and that the annual and occasional payments to the Exchequer equalled these profits. What is certain is that large annual payments had to be made by the moneyers as *firma*, and that occasional payments *extra firmam* were made when the type was changed, to say nothing of fines imposed perhaps by the Exchequer for offences. Thus Domesday says, ‘Comitatus Oxeneford reddit firmam . . . de moneta xx. libras denariorum de xx^{ti} in ora.’ Leicester pays the same amount

'de monetarijs,' so that it is probably right to regard the previous passage as referring to the mint, though one or two editors have translated it as if it meant only a cash payment as contrasted with the other payments in kind which are estimated by money value. Beyond this Domesday is silent as regards the Oxford moneyers, but the rule seems to have been that each moneyer paid in addition, 'quando moneta vertebatur,' a sum of twenty shillings or thereabouts, which was 'extra firmam,' as we are told in the Customs of Chester. Very little further information can be obtained even from the Pipe Rolls in later days, but here and there a passage is worth noting:—

'Id̄ vīc Redd̄. Comp̄ . de xiiii. li. de Monē de Oxinef. In tñ . xi. li. 7 . vi. s̄ . 7 viii . d̄.

'Et In pdōn . p bñ d̄ . Eisd̄ Monē . Liii . s̄ . 7 iii . d̄
Et Quiet^o est ¹.'

Or again:—

'Id̄ vīc redd̄ Comp̄ de q̄t̄. xx . m̄ de Burgo de Oxin̄ 7 de Monē.

In tñ libauit . Et Q. . . .²'

Or:—

'Adam Monē redd̄ Comp̄ de .i. m̄ . p̄p̄ prop̄sturam
In tñ libauit. Et Quiet^o est ³.'

But beyond these few entries there is nothing, and the general silence leads us to suppose that everything worked with smoothness and regularity. Returning to the question of profit however, the cost of coining, which included tools or sub-operarii, and the payments to the State, could have left little or nothing for the moneyer, even if he were entitled to receive it. Then again, whatever time he gave to this duty was of necessity taken from the time he could give to his own business, a very serious matter for a prosperous merchant. Hence it is not very surprising to meet with the following, quoted by Madox:—

'Walterus le Lingedrapier r. c. de v marcis, quia noluit facere

¹ Great Roll of the Pipe for the fifth year of the reign of King Henry the Second, A.D. 1158-1159. Pipe Roll Soc. Series, p. 35.

² Ibid. 7 Henry II (A.D. 1160-1161).

³ Ibid. 21 Henry II (A.D. 1174-1175).

monetam Domini Regis ; In thesauro ij marcæ, Et debet iij marcas ¹.'

This worthy Oxford citizen objected, possibly for the reasons suggested, perhaps because afraid of the stringent conditions attached to the office. The record of his fate, however, has an additional interest, proving that the duty of coining was one that could not be refused without penalty. It shows the official character of the work, one of those many necessary duties imposed on cities by the Crown, from which they were always anxious to shake themselves free. In alluding to the changing of the dies it should have been said that this occurred as nearly as possible every two years, so that the charges in this respect were considerable. A new type did not displace the previous currency, payment being accepted at the Exchequer both in old and new money ². In the hoards it is not unfrequent to find from three to five types, or those of different Kings. The natural wish of the private person to have the newest money, which is most easily current, and the system at the Exchequer were sufficient to prevent any abuse in this direction.

As regards the weights of the pennies included in this book the Tower Pound, which has come down to us, is usually regarded as the standard. It is equal to 5400 gr. Troy, which makes 240 pennies, each pennyweight being $22\frac{1}{2}$ grains or 1.458 grammes. It should be noticed, however, that the early pennies belong to a much higher standard, and that those from the reign of Cnut to the middle of the reign of Edward the Confessor belong to a much lower standard. The Laws of Æthelræd, already referred to, order 'quod xv ore libram faciant,' and if we interpret literally the Domesday remark about Oxford 'lx libras ad numerum de xx^{ti} in ora,' this would give 300 pennies to the pound instead of 240, making the pennyweight 18 grains or 1.166 grammes. This agrees completely with the weights of the Oxford pennies during the greater part of the reigns of Cnut, Harold, Harthacnut, and Edward the Confessor, especially if allowance is made for wear or the legal minimum. Subsequently to this I suppose

¹ *The History and Antiquities of the Exchequer*, 1711, p. 389 (Mag. Rot. 29 Henry II).

² See Pipe Rolls Series.

the Tower standard to have come into force. The metal should always be 11 oz. 2 dwts. of fine silver to 18 dwts. of alloy. The results arrived at in weighing these pennies are often very interesting, even though the pennies were clipped probably by shears and were never intended to challenge the accurate weighing-machines of the present day. From the Tealby hoard 50 pennies were weighed separately and each balanced 22 grains; 900 were weighed against 900, and the difference was only 2 grains, and so on. In the present book I have only given the weights of those in good condition, for it is by these alone that one is able to judge the standard fairly.

The various contractions such as MO or MON stand for Moneta or Monetarius. If 'Moneta' on the pennies of Eadmund and Eadgar is the full word, then it would seem to mean Reingrim's money or Æthelwine's money; the names of some moneyers are put actually in the genitive. The later word ON simply means 'in' Oxford, and the two are often used together. The pellets, which I have been careful to reproduce, may possibly be moneyer's private marks to note the order of the dies or for purposes of identification, but so far I have never been able to reduce them to any system.

Something must now be said about the names of the Oxford moneyers contained in this volume. The curious habit of merely giving the Christian name makes it exceedingly difficult at this distance of time to identify these citizens. The same system prevails in the documents of the period, a man being usually described as Johannes aurifaber or Henricus carpentarius, and so on, this being quite sufficient to distinguish him in his locality. Now and again, however, definite proof occurs that this John or Henry had a surname after all, and it requires little investigation of a book such as the *Cartulary of the Monastery of St. Frideswide* to suspect that many of those indexed apart are one and the same person. Beginning at the end of the present volume for the sake of convenience, we find four moneyers of the last type of Henry III. They are Adam, Gefrei, Henri, and William. Without any other help it would be impossible to identify these among the crowd of names at our disposal. Fortunately that help is

forthcoming in a list in the Red Book of the Exchequer, already noticed on p. xvii. There they are called Adam Feteplace, Gaufridus de Stocwille, Henricus Simeonis, and Willelmus Sarsorius. Of the good position of Adam Feteplace there can be no doubt; his name frequently occurs in contemporary documents. Drapere Hall was one of his properties, according to Wood, and he left '40s annuall rent issuing thence to the nuns of Littlemore, to the intent that his anniversary should be kept, on the translation of St. Frideswyde, there¹. Shelde Hall, 'in St. Peter's in the Est, sometimes the tenement of Adam Feteplace²,' was also left by him to the nunnery. He was several times Mayor of Oxford³, and no doubt one of the founders of the well-known family that bears his name.

Galfridus de Stocwille (or Stockwell) was a member of another famous Oxford family, 'who, as they were in their times wealthy people and devout to the Church and poore, soe likewise [were] of great esteeme and bore the publick offices of this corporation in the raignes of Richard I, King John, Henry III, and Edward I⁴.' Stockwell Mede was so called after our moneyer, according to Wood⁵, and no doubt Stockwell Street and other places took their names either from him or his family. He was Mayor of Oxford more than once⁶. Henricus Simeonis is sometimes called Henry Simeon, but more usually Henricus filius Simeonis. His name occurs frequently among the witnesses to local deeds, and he also must be reckoned among the wealthy and devout. He was one of the two Praepositi of Oxford (before the office of Mayor was made) in the reign of King John⁷. He had a son Henry, who is usually called Henricus f. Henrici f. Simeonis, so that I think there can be no confusion, though the father

⁷ Wood's *City of Oxford*, O. H. S., Vol. III, p. 4.

must have been an old man at this time. I have little doubt that he is also the Henri who is a moneyer of Class III, short-cross pennies of King John, p. 80.

Of William Sarsorius I have not much information. He is evidently the same person as William le Saucer, who was Mayor of Oxford about A. D. 1258-1259, and signs in that capacity to a deed (St. Aldate, 49) of the Hospital of St. John, now among the muniments of Magdalen College. His signature also appears in the *Cartulary of St. Frideswide*.

Here, then, are four moneyers, who all appear to have held at one time or another the highest official position in the city. This perhaps should encourage us to look among the names of the leading citizens, the Kepeharmes, Toralds, Halegods, Burewolds, and others. But even so nothing very definite can come from what must at the best be mere guesswork. Helis (p. 82) may have been a member of another well-known Oxford family, de Pyrie, or Pery, connected with Pery and Worminghall, benefactors of Osney and St. Frideswide. At the same time, however, there seem to have been several citizens bearing the christian name Elias or Helias. Miles remains in obscurity unless he was 'the Draper,' but Henry is no doubt Henricus Simeonis again. Ailwine is almost certainly Ailwin or Eilwin le Turnour or Turnur, who was one of the bailiffs of the city, if not Praepositus. His family held property in St. Peter-in-the-East, and his name is frequently met with in the documents now in the possession of Magdalen College.

Next come the moneyers of Class I of the short-cross pennies (p. 79). Asketil, or Anketil as it is often written, occurs occasionally in the *Cartulary of St. Frideswide*. From the *Sandford Cartulary*¹ we get a small clue as to the identity of this particular man, for he signs himself 'Aschetillo fil Radi mone?' Iefrei may possibly be Galfridus Aurifaber, but his surname, if he had one, remains unknown to me. It seems too early for Geofrey de Stocwell already mentioned. Owein is no doubt Owanus, Audoenus, noted by Wood as one of the Praepositi of this city. He was, if I am not mistaken, father of Robert Owen, and grandfather of Henry Owen, well-known citizens. Rodbert remains unknown to me; he may be

¹ Wood MS. X. fol. 34 v., c. 1170.

a Burwold or a Kepeharm, but the name is very common. Ricard might possibly be Richard de Stockwell, the father of Geoffrey, or a Richard Segrim; but here, again, the name is too common to make any guesses profitable. Sagar is perhaps the one who is mentioned in the conveyance of a message to Elias de Pyrie by Petrus palmarius and Agnes, Segari mercatoris, his wife¹. The message is referred to as *quod Segarus mercator quondam tenuit*; Segar is mentioned elsewhere in the same Cartulary.

Turning to the first issue of Henry II (p. 78) there are three names only. The first, Adam, is no doubt the moneyer referred to in the Pipe Roll, 21 Henry II². Perhaps he is the Adam Ruffus, noted by Wood as a Praepositus of the city. The incomplete name Asc is probably Aschetil, and identical with Asketil. The last moneyer, Rogier, I should guess to be Roger filius Sewy, on account of the name appearing in the same roll with Adam, though he is not described as a moneyer.

As to the earlier names one cannot fail to be struck by their constant appearance in documents separated by long distance of time, thus showing their thoroughly local character.

Sweting occurs in the *Cartulary of St. Frideswide*³, '*terram que fuit Willelmi f. Swetyng*,' and again in the list of houses granted to Oseney Abbey, by the charter of foundation in 1129⁴. It was this moneyer who struck Oxford pennies for the Empress Matilda. Sagrim, one of the moneyers of Henry I, possesses a name well enough known in Oxford. The Segrimis occur constantly in the *Cartulary of St. Frideswide*, and a good deal about them will be found in the early portions of the history of Pembroke College⁵. The name occurs in the Osney charter already mentioned, and also in Domesday; evidently a numerous and prosperous family. The Henricus filius Segrimi, noted by Wood as Praepositus about 1170, was very possibly a son of the Oxford moneyer.

¹ *Cartulary of St. Frideswide*, O. H. S., Vol. I, p. 145.

² See p. xxii.

³ Vol. I, p. 261.

⁴ *Early History of Oxford*, O. H. S., p. 274, and see also '*Sweting Hall*,' Wood's *City of Oxford*, Vol. I, p. 525.

⁵ O. H. S., pp. 2-11.

Sawi, another moneyer of Henry I, also requires little introduction: the name is generally written Sewi or Sewy, and the family must have been numerous. Wood mentions a charter in the Register of Stodley, about 1190, which refers to the 'gate of Roger Sewi,' in this city¹. This perhaps is the Roger, one of our moneyers, whom I have already guessed to be Roger filius Sewi, so that in all probability we have father and son carrying on the same office. The name appears in Domesday and most of our local documents; it survives in Sewy's Lane. Of Rawulf nothing profitable can be said. The name is common enough locally, and Wood notes, 'Anno 1134 or thereabouts: Iohannes filius Radulphi, Leofwyne le Wantar, praepositi Oxon'; the father of the first-named might be the very man. The only other moneyer of Henry I, mentioned in the text, is Æglnoth. No doubt the same name as Ailnoth, which appears here and there in the *Cartulary of St. Frideswide*, John Ailnoth, Robert Ailnoth, and others nearly a century later. The Osney charter (dated 1129), previously referred to, mentions Aylnoth, in all probability our moneyer. This man appears to be called Reymundus Aylnoth, and no doubt the two names should be taken together, and the man be identified with the Reimundus noted by Wood as Praepositus of the city about 1150. Ailnoth Hall, later known as Haberdasher's Hall, was apparently his tenement: it was owned by Osney and stood 'somewhere about the site of the new entrance of Brasenose College².' Before leaving the reign of Henry I it should be noticed that an entry in the Abingdon Chronicle refers to land bought in Oxford by the Abbot, presumably in the early part of the reign. It mentions 'the land of Eadwin the moneyer and his brother³.' No pennies have come to light, so far as I know, bearing the name of this moneyer either in this or the two preceding reigns. It seems probable that it is an ancient name handed on with the property as was so frequently the case, and it may be the Eadwi on p. 25; or it is possible that some moneyer in London or elsewhere held property in the city.

¹ Wood's *City of Oxford*, O. H. S., Vol. I, p. 485.

² *Oxford Topography*, O. H. S., p. 176.

³ *Early History of Oxford*, O. H. S., p. 264.

In the reigns of William I and II we have Æglwine and Ægelwi. There are names in Domesday such as Alwin and Alwi, which might be the same. It seems natural to suggest that the former was an ancestor of Ailwine the Turner, and that he also had some descent from the Ægelwine, moneyer of Harthacnut (see p. 44). Then the Osney charter, previously referred to, mentions 'Godwinus monetarius, Brythicus monetarius,' who may be our Godwine and Brihtred, and Domesday also mentions Bricfred and Godwin. Anthony Wood notes under S. Edward Hall, 'Tenementum Godwyni monetarii, Aula Edwardi, 33s. 4d',—soe an ancient rentall belonging sometimes to Osney; denoting it to be, in ancient time not long after the Norman Conquest, the tenement belonging to a minter and who perhaps at the foundation of that Abbey gave it thereto¹. The tenement was afterwards conveyed to Christ Church by Henry VIII.

Ælfwi may perhaps be one of those called Alwi in Domesday. Wulfwi may be Wluui the Fisherman in the same list; later the Abbot of Abingdon purchased 'the land of Wlfwi the fisherman.' Of Brihtred I can discover nothing beyond the reference quoted above, and the name of Haregod is so completely absent in all documents that I am almost led to suspect it to be the same as Halegod, an important citizen family who gave their name to a lane and a hall in this city. Swetman alone has the distinction of being mentioned in Domesday as 'Suetman monetarius,' probably to distinguish him from the other Swetmans there mentioned. Some of these moneyers were at work also in the reigns of Harold II and Edward the Confessor.

Coming to the names before the Conquest, there is a grant of land to St. Alban's Abbey, which is of some interest; it reads, 'et Goduinus praepositus ciuitatis Oxnafordi et Wulfwinus praepositus comitis et omnes ciues Oxanfordiensi³.' Judging from the evidence already given as to the high position of our moneyers, this is very likely to be the Godwine, moneyer in the early part of the reign of Edward the Confessor.

¹ Wood's *City of Oxford*, Vol. I, p. 161.

² *Early History of Oxford*, p. 264.

³ So in *Cod. Dipl.* IV. p. 285, date about 1050-2.

Godric, a contemporary of his, may be referred to in the charter of King Stephen¹, 'De terra cum molendino quam Godric tenuit viijs. viij*d.*,' and the name also occurs in the grant to Oseney Abbey² and Domesday. Leofwine is a common Oxford name and occurs frequently, one being noted by Wood as Praepositus about A.D. 1134. Of the other names it is only possible to show their local character by observing that they repeatedly reappear in Oxford even centuries afterwards, some of them continuing to the present day. Taking such a name as Ingelri in the reign of Æthelstan, for instance, we find in a charter of King Stephen some two centuries later, 'De terra quam Ingelry tenuit viij*d.*'³ Now we meet with John Britwold, or elsewhere with Richard Coleman, and others; but this is a subject which would make large demands on space, and I have only made the previous remarks with the object of showing the evidence as to the position of moneyers and the interest that arises from the study of these names in such early times. Apart from these two points of view some of the early names, such as Rægenward, an official name that appears in 'Beowulf,' have a distinct interest on account of their form and meaning.

In leaving this subject I should like to call attention to the fact that in arranging the names at the head of each type I have refrained from any attempt at assuming some of them to be one and the same person. They may be, but serious difficulties eventually arise in the easiest paths, and having tried for myself I thought best to leave them alone. In the reign of Æthelred II, for instance, you find Æthelmær and Ælfmær, Æthelwine and Ælfwine. Are these two men or four? Taking the following, 'Æðeluuig meus praepositus in Bucingaham et Winsige praepositus on Oxonaforda⁴,' dated A.D. 995 in the reign of King Æthelræd, it is interesting to note that the Stockholm Collection possesses a penny of that date by 'Ælfwi' monetarius at 'Bucci,' the first letters of Bucingaham. I am very much inclined to regard this name as a shortened

¹ *Cartulary of St. Frideswide*, Vol. I, p. 19.

² *Early History of Oxford*, p. 274.

³ *Cartulary of St. Frideswide*, O. H. S., Vol. I, p. 19.

⁴ *Cod. Dipl.*, Vol. VI, p. 128.

form of the other. Then there are several names in which a letter appears to be mute ; Leofman and Leoman, Wulfwi and Wulwi, Ælfwi and Ælwi, Ælfwine and Ælwine. Each pair stands for one name only perhaps, but the difficulty arises when we propose to go further and assume the last two pairs to stand for one name only. Then there are a few names in which a letter is soft, thus Ægelwine and the later Ailwine are one and the same ; but who is to say whether Æglwi is short for Ægelwine or Ægelwig, or whether Ælwi may not represent Ælfwig. Better then to leave them as we find them.

The origin of the name of Oxford has already been discussed in the *Early History of Oxford*, but a little repetition will doubtless be forgiven, seeing that the coins provide us with such a large number of readings. The earliest of these deserve some attention :—

Æthelstan, Ox. Vrbs. *Eadmund*, O, Ox. *Eadred*, O, Ox. Vrbs. *Eadgar*, Oxna. *Eadweard II*, O-xna, O-xa.

Æthelræd II, Ox, Oxn, Oxna, Oxnaf, Oxnafo, Oxan, Oxen, On, Ona.

Cnut, Ox, Oxn, Oxa, Oxan, Oxe, Oxen, Oxena, Oxs, Oxse, Oxsen, Oxsen, Oxsenna, Oxsn, Oxсна, Oxsa, Oc, Ocx, Ocxe, Ocxen, Ocxene, Ocxn, Ocxa, Oexen, Onxen, Onxsena, Ocxc.

Harold I, O, Oxna, Oxan, Oxse, Oxcn, Oc, Ocx, Ocxe, Onx.

Harthacnut, Oxa, Oxan, Oxc, Ocxe, Ocxen, Ocxene, Ocxanafo, Oex, Oexe, Droxana, Occene, Cox.

Edward the Confessor, Ox, Oxa, Oxan, Oxe, Oxen, Oxene, Oxenef, Oxenefo, Oxenefor, Oxna, Oxne, Oxnef, Oxnf, Oxenex, Oxenexfo, Ocx, Ocxa, Ocxe, Ocxen, Ocxene, Ocexenaf, Onxe, Onxenefo.

Harold II, Oxe, Oxenefo, Oxenfo.

These readings show, as has been observed before, that the sound 'Ox' is an essential element of the first half of the name Oxford, and they leave little room for doubt as to what that name means. The genitive plural of 'Oxa,' spelt in various ways, is compounded with 'ford,' and means the ford of the oxen. Other evidence helps us to carry the pedigree of the spelling still further back. We find Oxnaford mentioned

A.D. 912 in the Anglo-Saxon Chronicle, and in an early list of hides in England¹, about the end of the eighth century, we find 'To Oxeford.' The latter is a late copy as the spelling shows, but it is clearly made from an early document, and the scribe had no doubt about the name of our city, in spite of his other difficulties. The name then is plain enough, and it was used in connexion with a river which was known by the English both north and south of the city as the Temese. That at least seems to me to be proved beyond doubt by the *Cartularium Saxonicum*, and to dispose of all speculations as to whether the original form of the ford name was Ousanford or the like. The word Temese carries us back to classical times, and the question as to whether the last three letters are the same as Ouse to a still earlier period. This places such a large gap of time between a possible derivation and the English occupation of the country, and divorces us so completely from the facts of the ninth and tenth centuries that I can see little advantage in pursuing the subject. The English had no hesitation in using the Celtic names of rivers correctly when they needed them; many examples could be quoted, but one quite close to Oxford will suffice. This is the river Eoc (now called Ock) at Abingdon. The charter² A.D. 955 beginning 'Ærest on eoccenforda' is interesting as showing us that name contemporary with Oxnaford, and I can see no reason for supposing any corruption in the latter one. There may, however, have been some confusion as to its meaning, for we cannot overlook the old English 'Oxn,' an arm-pit, which must have been obsolete in very early days. However that may be, our own ford was not the only one so called. A grant³ of land at Brydancumbe, co. Wilts., A.D. 937, includes in its boundaries 'lang streames oþ oxnaford,' and Mr. Parker in his *Early History of Oxford* has noted another in Witley parish, Surrey. There are many fords in England named after animals, and the word 'Oxen' is not unfrequently compounded with gate, bridge, field, and so on⁴. In

¹ *Cartularium Saxonicum*, Vol. III, p. 672.

² *Ibid.*, p. 68.

³ *Ibid.*, Vol. II, p. 421.

⁴ See *Early History of Oxford*, O. H. S.

all probability then the obvious derivation of the name Oxna-ford is the correct one.

The list of readings given above deserves a little further attention. First, there is the reading 'Ox. Vrbs,' which seems to suggest that the ford-name had not yet become definitely attached to the city, which at one time must have been either the burh by the Oxenford or have possessed some other name. On the other hand, Vrbs may be attached to the name in the same way as Civitas is to that of other cities; and Civitas may be intended in the Cnut reading OCXC and the Harthacnut reading COXE. Then the reading 'Oexen' does not appear to be an error. It is so written as a gloss over 'boves' in an Anglo-Saxon psalter¹, and again in the Ecclesiastical Hymns. Another peculiarity is the strong tendency to place the letter 'n' before 'x.' Thus we have 'On Onxe' as late as the reign of Edward the Confessor, the same peculiarity appearing in the reigns of Eadweard II, Æthelræd II, Cnut, and Harold I. The change, which is a natural one, was helped no doubt by the word 'on' coming before, but in one or two cases it is difficult to decide what has happened. Thus in Cnut's reign we have 'Eadwi onxsena' and in Edward the Confessor's reign 'Ægelw.ion:xenefoi,' where the 'on' has either been dropped or, as is more likely, the first 'O' of Oxford has fallen out. I can offer no explanation of Droxana, if correctly read, nor of Oxenex: perhaps both are blunders. Doubtless the appearance of the letter 'c' as in Ocx, during the reign of Cnut and succeeding reigns, was due to Danish influence.

The 'Orsnaforda' pennies are not included in the text, and I shall deal very briefly with them here, for they also have been discussed at some length in the *Early History of Oxford*. Many years passed before they were assigned to this city, and the argument appears to be that they *must* be Oxford pennies until the contrary can be proved. No doubt the wish to assign an Ælfred coinage to this city, associated in legend with his name, is very praiseworthy, but one feels bound to wait for proof in the face of obvious difficulties. These coins appear to have been found in Lancashire only. In itself perhaps this would not be insuperable when we consider that

¹ Surtees Society, Ps. XLIX. 10 and Vol. II, p. 191.

Oxford pennies have been found far and wide, but the fact is significant when the character of the other coins found with them is recognized. The most famous of these finds was made at Cuerdale near Preston, and it included a large number of St. Eadmund pennies bearing moneyers' names which are seldom English and legends which are often very corrupt, a few of Ælfred Rex Doro type, some of the London and a number of the 'pall' types (B. M. Types XIV and XV), which also bear the name of Ælfred, together with a few other types. There can be no doubt whatever that the bulk of this hoard was a Viking coinage struck in the east and north of England sometime between A. D. 880 and 910. The 'pall' type in my opinion is distinctively Norse or Danish, and should never have been included, as it has been, in the West-Saxon series. The style alone should have been sufficient to show this, and the fact that many of the moneyers are the same as those on the types of St. Eadmund and Guthorm (Æthelstan II). The London type also is Danish. The Canterbury pennies have the same character, as can be seen by comparing them with those of the Northumbrian kings, Cnut or Siefred. The Orsnaforda pennies are mostly of the same type as those of Earl Sihtric¹, whilst some of a different type² bear the long cross on the reverse which is frequent on these northern issues. It is clear then that the Orsnaforda pennies do not belong to a West-Saxon coinage, and that an explanation of the legend should be sought by examining in the first place the legends of the pennies in whose company they were found. Looking at the Orsnaforda pennies described in the British Museum Catalogue it seems as though some process of corruption had been gone through before a passable reading such as **ORSNÆFORDÆ** was evolved. The second letter especially is in doubt. We have:—

Vol. II, B. M. 137 **OHΣIIÆEORDÆ.**

Vol. II, B. M. 149 **OIZIIÆEORDÆ.**

Vol. II, B. M. 153 **OHSIIEOÐÆ.**

¹ B. M. *Cat. of English Coins*, Vol. I, PL. XXVIII, No. 1.

² *Ibid.*, Vol. II, PL. V, No. 2.

Now looking at the St. Eadmund pennies is it merely a coincidence that we have :—

Vol. I, B. M. 224 + $\overline{\text{AN}} \text{ } \overline{\text{S}} \text{ } \overline{\text{NREIOITR}} \overline{\text{A}}$

The third penny above seems to me to represent the same sound as this St. Eadmund penny, and the St. Eadmund penny in its turn is probably a corruption of $\overline{\text{AN}} \text{ } \overline{\text{S}} \text{ } \overline{\text{IERMONET}} \overline{\text{A}}$ or some such legend, Ansier being one of the St. Eadmund moneyers. It will be noticed that several of the Orsnaforda pennies have the S laid flat as in the Ansier pennies, Vol. I, B. M. 243, 248–55, and they have also the second letter H sometimes as in Vol. I, B. M. 248.

This can hardly be accidental, for in other Orsnaforda pennies we notice groups of letters that appear elsewhere. Thus Orsnaforda, Vol. II, B. M. 150 $\overline{\text{FY}} \text{ } \overline{\text{S}} \text{ } \overline{\text{IIV}}$, and in Vol. I, B. M. 389 St. Eadmund $\overline{\text{FII}} \overline{\text{EVS}} \overline{\text{II}}$; Orsnaforda, Vol. II, B. M. 151 $\overline{\text{ER}} \overline{\text{DLS}}$, and Vol. II, B. M. 31 Dorobernia penny $\overline{\text{ER}} \overline{\text{DEL}}$; Orsnaforda, Vol. II, B. M. 153 $\overline{\text{IEIII}} \overline{\text{EID}} \overline{\text{IIO}}$, and Vol. I, B. M. 221 St. Eadmund penny $\overline{\text{AIEM}} \overline{\text{NETMO}}$. The Dorobernia and the St. Eadmund pennies are connected by a type in the British Museum, and the Dorobernia and Orsnaforda pennies are connected by the name of the moneyer ‘Bernuald’; so that when we consider that large numbers have been found together, and that the legends show every kind of corruption, it seems that there is very good reason for the explanation offered above. In this case some of the extraordinary legends on the Orsnaforda type should be corruptions of other moneyers’ names and not variations of a place-name which has been guessed at as Oxford.

Even if such an explanation be dismissed as improbable, the evidence of the coins themselves so strongly suggests extensive corruption that I should still look to the more grammatical readings $\overline{\text{ON}} \text{ } \overline{\text{SNEODRA}}$, $\overline{\text{ON}} \text{ } \overline{\text{SHAFORDA}}$ or $\overline{\text{ON}} \text{ } \overline{\text{SNAFORDA}}$; more especially as a Siltric penny of this type¹ bears the name $\overline{\text{SCELD}} \overline{\text{FOR}}$ plainly on the reverse with the name of a moneyer ‘Gundibert,’ who also appears, it is interesting to note, in the St. Eadmund coinage². In

¹ B. M. *Cat. of English Coins*, Vol. I, p. 230.

² *Ibid.*, Vol. I, p. 422.

this case the Lancashire town of Salford might have strong claims. Looking finally at the evidence afforded by the pennies included in this book as to the definite character of the place-name Oxford, I am quite unable to accept the Orsnaforda coins, though the local conditions may have been favourable for a Danish coinage. Consequently these pennies are left out, as they should be till their claim has been established with greater certainty.

Apart from this, there are one or two pennies included in the text which should be noticed. First comes a penny of Æthelstan (No. 7, p. 2), with the spelling Saxorum. Derby, Nottingham, and Tamworth pennies also have this peculiarity, on which Sir J. Evans has made the following observation: 'I know of no other coins of Æthelstan bearing this title than those of the four towns now mentioned, though of course others may exist, and indeed probably do exist of the Leicester mint. The form SAXORVM is remarkable and suggestive of its having been devised by those to whom the name of Saxon was unfamiliar. So far then as the present evidence goes I am justified in suggesting that the coins of Æthelstan bearing his title as King of the Saxons were in the main struck in the beginning of his reign, in that part of his dominions which had recently been wrested from the Danes or in the adjacent districts, and that the title was employed with the especial view of impressing upon his Midland subjects the fact that they were no longer under Danish or Mercian rule, but now owed their allegiance to the Saxon whose superscription was impressed upon their coins¹.' In connexion with this the penny of Eadred (p. 7) assumes a new interest. Its peculiarity is that it bears on the obverse the title Eadred Rex Ox Vrbis. The fact that the proper place of the name of the town is on the reverse, and the appearance of this penny, led me at first to suspect its genuineness, more especially as the penny described on p. 6 is of the type we should expect and the reign is a short one. It is regarded, however, by better judges than myself as genuine; and if that be the case, it is clear that the local conditions demanded a special title. This gives additional weight to the remarks which

¹ *Num. Chron.*, 1885, p. 142.

have been made on the Æthelstan penny. Danish influence must have been more widespread than we are led to suppose by looking at treaties or boundaries. As regards the pennies of Æthelræd, I can only repeat what I have said in the text, that the names of the moneyers on p. 12 clearly prove that most of the pennies were issued late in the reign and not at the beginning as has been supposed hitherto. The great disaster at this time was the burning of Oxford by the Danes in the year 1009, after their march through the Chilterns. If we are right in supposing that there was already a considerable Danish element in the town, and if they had suffered persecution, this would have been sufficient reason for the sudden appearance of the invaders, and the burning must have been partial. However, it should be noted that the Type on p. 12 and the first Type of Cnut provide us with an entirely new list of moneyers.

There are no pennies of Eadmund Ironside; and those of Cnut appear to be the most common in the whole series, though it is noticeable that in England they are rarely found and usually command high prices. As a curiosity the penny of Sihtric should be noticed (p. 24). The reverse has the same reading as one of the long cross pennies of Æthelræd (p. 20), and in all probability both obverse and reverse were based on that type. The Stockholm Collection has a considerable number of these pennies with the reverses of different English cities, but I can offer no explanation of such variety, even though done in imitation, more especially as the reverses do not seem to be from the original English dies, which might have been bought or taken in plunder for such a purpose. In the reign of Edward the Confessor we meet for the first time with the type of penny which has the legend PACX. The interest of this lies in the fact that the constant appearance of these letters on English coins has been interpreted as an allusion to the great meeting of the Witenagemot which was held in Oxford in A. D. 1017-1018. Mr. Keary, in his Introduction to the *Catalogue of English Coins in the British Museum*, remarks that 'The terms of this agreement of Oxford were to a certain extent embodied in a series of statutes identical with or similar to those which bear the

name of Cnut in the collection of Anglo-Saxon laws. We may assume that the coins with the legend "Pax" (PACX) have some reference to the agreement at Oxford, or to the promulgation of Cnut's Laws, and to the theory that the peace of Eadgar had been re-established¹. One other penny should be noticed, it is that of Matilda struck by Sveting. There are charters of the Empress dated from Oxford, and she seems to have made the city her head quarters from July, 1141, to December, 1142, until her flight in fact. The position of this moneyer cannot have been a very pleasant one.

It can hardly fail to be of interest if I add a few words about hoards. For the most part they have been found buried, as will be seen, in places where we should least expect to find them. To a numismatist such finds have a peculiar value. It is not merely that the locality of the find may confirm some previous historical information or throw an entirely new light on some historical problem. A mass of coins deposited at any one time affords valuable information as to the sequence of types; it yields as a rule pieces in the best condition free from tiresome doubts as to their readings; it sets at rest any fears as to the genuineness of the pieces described. The discovery of a hoard, in fact, has many advantages should the coins fall into the hands of those able to appreciate and describe them.

Of the Æthelstan pennies several were found in Rome. 'During some excavations which were being carried on near the House of the Vestals, at the foot of the Palatine, a hoard of coins was discovered, enclosed in an earthenware vessel. It consisted of 830 Anglo-Saxon pennies, ranging in date between 871 and 947, that is to say, of coins which to all intents may be accounted contemporary. Together with these English pieces were two denarii of Pavia, one of Ratisbon, and one of Limoges, all of the end of the ninth century, or the first half of the tenth, and finally, one solidus aureus of the Byzantine emperor, Theophilus (829-842)². These coins were described by De Rossi, and among them were the Oxford pennies struck by Eardulf, Vðelric, Maðelwald, and Sigeland.

¹ Vol. II, p. lxxxv.

² *Num. Chron.*, 1884, p. 225.

Another Æthelstan penny struck by Maðelwald was found in the year 1876 by a gamekeeper, who 'in digging for a missing ferret at a place called Killyon Manor, Hill of Down, Meath, came upon a hoard of 88 silver pennies¹.' In this hoard, described by Sir John Evans, there were pennies of Eadweard the Elder, Æthelstan, Eadmund, and Eadred, with single examples of the coinage of three Northumbrian kings. Of the Eadmund pennies one proved to be struck at Oxford by Reingrim, a coin at present unique and now, with the Maðelwald penny, in the collection of Sir John Evans.

From Ireland we come to Skye, wherè a find of such an interesting nature was made that I give Mr. A. B. Richardson's account complete. 'On 7th January, 1891, Mr. Reginald Macleod, the Queen's Remembrancer, sent to the Museum two silver coins which had been found on the shore near the Storr Rock, about eight miles from Portree, in the Isle of Skye, requesting Dr. Anderson to inform him what the coins were, and, whether they were wanted for the National Museum. Dr. Anderson immediately replied, stating that the coins were Cufic, of the Samanide Caliphs, dating about the commencement of the tenth century, and that they were wanted for the National Museum. At the same time he pointed out the important fact that when these Cufic coins are found in this country or in Scandinavia they are usually associated with hoards of the Viking time, consisting of coins, ingots, and personal ornaments of silver, and that in the last instance of their occurrence in Scotland (*Skail Treasure Trove*, Orkney, 15th April, 1858²) they were accompanied by 16 lb. weight of bullion, largely made up of personal ornaments, such as armlets and massive brooches of silver. He therefore suggested that it should be ascertained whether the exact spot in which the two coins were found could be identified, in case there might be other portions of a similar hoard still to be discovered. Accordingly, on the 20th January, the Queen's Remembrancer informed Dr. Anderson that the result of a search conducted by the assistant to the Procurator-Fiscal

¹ *Num. Chron.*, 1885, p. 128.

² In this hoard Dr. Anderson kindly informs me that there were no Oxford pennies of Æthelstan, but only one of Leicester.

in the spot where the two coins were found had been the discovery of a hoard of 106 coins and 23 pieces of silver¹. The writer then describes the bullion, which consisted of fragments of brooches, bracelets, and portions of ingots cut into short lengths. There were 31 coins and 1 fragment of Eadweard the Elder; 56 coins and 1 fragment of Æthelstan; 1 of Plegmund Archbp. of Canterbury; 1 of Sitric of Northumbria and another of a similar type; in all 90 coins and two fragments, to which may be added 18 oriental coins. Thanks to the interest and intelligence displayed on this occasion two Oxford pennies of Æthelstan were recovered; one struck by Rægenward and the other by Wynelm; a penny struck by the latter moneyer, however, already existed in the B. M.

These few finds supply us with most of the known pennies before Eadgar's reign. Fortunately from that reign onwards they have been so numerous in one particular region as to make description of them unnecessary. That region is the southern part of Sweden on the Baltic, and more especially Gotland. Hence comes that apparently inexhaustible supply, which has made the National Collection in Stockholm so superior to our own in certain reigns. Most of my readers will be familiar with B. E. Hildebrand's able book *Anglosachsiska Mynt i Svenska Kongliga Myntkabinettet*. In that work alone he describes one hundred and eighty different pennies of Oxford under the reigns of Eadgar, Æthelræd, Cnut, Harold, Harthacnut, and Edward the Confessor. Yet such is our poverty at home that only forty of this period can be found in the second volume of the B. M. Catalogue of the Anglo-Saxon Series. Since Prof. Hildebrand published his book in 1881 other finds have been made, so that this number has been added to, whilst the National Collections at Copenhagen and Kristiania still further swell the total. These finds still continue at irregular intervals, and one of them, though a very small one, was photographed for me at Stockholm just after its arrival² in the summer of 1902. It was the first Anglo-

¹ 'Notice of a hoard . . . found in Skye.' By A. B. Richardson, Curator of Coins. *Proceedings of the Society of Antiquaries of Scotland*, Vol. XXVI (Vol. II, Third Series), 1892, p. 225.

² Enclosed in a cigar-box!

Saxon penny hoard that I had seen, and I thought the photograph would make an interesting frontispiece.

In England a great find of Edward the Confessor pennies was made at Upper Chancton Farm, Storrington¹, during the removal of a hedge. Here a great scramble took place, but a large number came to the B. M., including some Oxford pennies of Types VII, IX, and XI.

From the Conquest onwards the most interesting finds have been made in England, which amply illustrate the haphazard nature of such events and the real danger of these little records falling into ignorant hands. 'On Sunday afternoon, June 30, 1833, as four boys, under ten years of age, were playing at marbles in a small piece of pasture land called the Old Litten, attached to the homestead called the Manor House, in Beaworth, one of them discovered in the track of a waggon-wheel a piece of lead sticking up above the surface; upon stooping down to take hold of it, he discovered a small hole, into which he thrust his hand, and brought out a number of coins, his companions immediately following his example. Though they did not consider their treasure to be more than old buttons, they concealed a part of them in an adjoining potatoe field, and others they took into the village of Beaworth; but treating them as of no value, some they jerked into a pond, and others they flung about the road. Half a dozen villagers who were, as usual upon a Sunday afternoon, congregated in the street, were attracted by the circumstance, and being more aware of the value of the pieces thus discovered, hastened to the spot, and commenced a regular scramble for the booty. As some of the parties obtained possession of many more than others, the parents of the boys who first discovered the treasure became dissatisfied, and appealed on the following morning to Mr. Dunn of Alresford, the owner of the land. This gentleman immediately sent a confidential person to Beaworth, to claim from the parties the delivery of the coins to him, which was readily complied with, though, it is suspected, not to the full extent, and on the same evening Mr. Dunn received upwards of *six thousand* coins.

'The coins were deposited in an oblong box thirteen

¹ Described in *Num. Chron.*, 1867, p. 63.

inches long, eleven inches deep, and nine inches broad ; but it was so mutilated by the people, in their eagerness to get at all its contents, that only one side and a part of the bottom remained entire ; it had a small plain semi-circular iron handle, without any ornament or trace of inscription¹. It is interesting to note that according to the account of one of the villagers the coins were packed in regular layers. They were all pennies of William I, and all, with the exception of a hundred or so, were of the PAXS type. Amongst those recovered were one hundred and forty-seven Oxford pennies, an unusually large number, classified by the writer¹, above mentioned, as follows:—

2	BRIHTRED ON OXC
17	BRIHTRED ON OXN
14	BRIHTRED ON OXNE
31	BRIHTRIED ON OXSI
5	SIPETMAN ON OXI
4	SPETMAN ON OXI
2	SPETMAN ON OXN
56	SPETMAN ON OXNE
14	PVLFPI ON OXNEF
<hr/>	
145	

In addition there was one penny of the 'profile sceptre' type by HARGOD, and one of the 'sword and quatrefoil ornament' type by PVLFPI ; both of which would seem to come before the PAXS type in point of time. Coming to the reigns of Henry I and Stephen a very considerable find of their coins was made in Nottingham. 'Unfortunately,' says the writer², the men were 'ignorant of what they had found, and thinking they were only the tops or capsules of bottles, or pieces of tin thickly coated with oxide, commenced throwing them at each other.' One of these pennies was of the rare Matilda type, for which see p. 77.

¹ Description by Edward Hawkins, Esq., F.R.S., in *Archaeologia*, Vol. XXVI.

² *Num. Chron.*, 1881, p. 37.

To conclude with two other instances. The pennies of the first type of Henry II 'were found in 1807 by the side of a road which crossed a ploughed field at Tealby, near Rasen, in the north of Lincolnshire¹.' After 'the best specimens of all the varieties of towns and mint masters' had been taken for the B. M. and private collections 'the rest, to the number of 5127, were melted at the Tower¹,' a cruel fate from which they might well have been spared. This was a very notable discovery, adding no fewer than seventeen towns to the previously known mints of this type. Oxford was one of them, but it is not stated how many Oxford pennies occurred in the hoard; we are only told that the varieties were:—

ADAM · ON · OXENE

ADAM · ON · OXENFO

ASC · · · · ON · OXEN

ROGIER · ON · OXENF

Of the short-cross pennies 6,217 were found at Eccles, near Manchester, 'deposited in an earthen pot, with the mouth uppermost; but so fragile in its material that the upper portion broke away with the least pressure of the surrounding earth².' Among these were thirteen Oxford coins struck by Ailwine, Henri, Iefrei, Miles, and Ricard. Quite lately another very large hoard of these pennies was found at Colchester, and two new moneyers, Asketil and Rodbert, were brought to light.

It has been suggested that the presence of Æthelstan silver pennies in Rome resulted from the customary payment of Rom-feoh, a hearth-penny paid on St. Peter's mass-day, which was probably used to support the English school in Rome. The money, however, may have belonged to any one of the numerous English travellers to Rome in those days, and it is hardly necessary to fix definitely on a particular reason. The rapid settlement of Norsemen on the western islands of Scotland, the Isle of Man, and the coast of Ireland, explains the appearance of Æthelstan Oxford pennies in the Isle of

¹ Description by Taylor Combe, Esq., in *Archæologia*, Vol. XVIII.

² *Num. Chron.*, 1865, p. 219.

Skyc. These folk apparently differed little from other Scandinavian people in their desire for a regular currency, but in such early days they probably gratified their wishes by force. The same applies to the Æthelstan and Eadmund Oxford pennies found in Ireland. The case of the hoards in Sweden and Gotland seems to be different. The great number of Æthelræd pennies points, it is true, to plunder or to the large bribes which were given to the Danes to withdraw. But then the coins of Cnut, Harold I, Harthacnut, and Edward the Confessor are equally numerous. They are found mostly on the Baltic coasts of Sweden and in Gotland. Wisby was a great trading centre, on account of its security, in very early days, and the English pennies are found mixed with continental and immense quantities of Cufic coins, thus denoting a trade route to and from the East across Europe. Without doubt the Scandinavian empire of Cnut gave additional prosperity to trade, and there may have been policy in the immense taxes levied on England, when her sound currency was so much needed and used in these northern districts. The Stockholm Collection also possesses a fair number of pennies of William the Conqueror, showing the continuity of trade relations between England and the Baltic, which have in fact remained unbroken to the present day. The reasons which can be offered to explain the finding of hoards in England are altogether too various for discussion here, but one feature must be noticed before I bring these prolonged remarks to an end. No hoard of Oxford pennies, belonging to the period included in this book, seems to have been found in Oxford. Perhaps this may be due to the fact that such a large part of the old city is covered by permanent buildings. One or two pennies have been found at Carfax and are now in the Ashmolean, and a quantity of silver pennies belonging to a later period, the first three Edwards, were once found in St. Clement's. No doubt a time will come.

In conclusion, I have to remember the kindly interest of the late Professor York Powell, who gave me letters of introduction to the museum authorities at Stockholm, and urged me to begin this task. I have to thank Professor Hans Hilde-

brand for his permission to work there, and Dr. Bernhard Salin for unceasing attention and the trouble of sending a large number of photographs after me. I have to thank Professor L. B. Stenerson of Kristiania and Direktor Hauberg of Copenhagen for like attentions; and also Professor A. Pasqui of the Museo Nazionale Romano for sending me casts of the Oxford pennies under his care, and Dr. Anderson for allowing photographs to be taken of the two pennies in the National Museum, Edinburgh. Mr. George Macdonald assisted me greatly at Glasgow, and Sir John Evans has kindly sent me casts and allowed me to describe the pennies in his collection, and so have Mr. P. W. P. Carlyon-Britton, Mr. Andrew, and Mr. Lawrence. Then I am much indebted to Mr. H. A. Grueber, Assistant Keeper of Coins and Medals in the British Museum, for permission to follow the descriptions and arrangement in his *Catalogue of English Coins*, for a large number of casts, and for much attention. Lastly, I have to thank the Controller of the Clarendon Press for the trouble he has taken in producing this book.

CHARLES L. STAINER.

1. The descriptions and order of the Types, under which these pennies are arranged, are mostly the same as in Vol. II of the *Catalogue of English Coins in the British Museum*, by H. A. Grueber, F.S.A. Beyond a certain point no attempt is made here to facsimile the legends. In the originals small wedges are occasionally used instead of pellets, and the letters N, M, and X especially are of various shapes. Frequently owing to the poor condition of a coin it is difficult to say whether pellets are used or not, but throughout the book, the object of the author is to present the legend clearly so far as he can read it, and only to describe those which he has personally inspected or of which he has seen casts or photographs. The weights are in grammes.

The names of Æthelstan's Oxford moneyers being rather uncommon, it would seem possible to claim for Oxford some of the numerous pennies in his reign and the two following ones which do not bear the name of the mint-town. An Æthelstan penny by Sigeland at Rome, though without the name of the town, is almost certainly an Oxford penny, and in the later reigns the names of Othelric and Wynnelm also occur. The author only includes, however, in the present book those pennies which bear the initials of the name of the city. For the Alfred pennies which have been attributed to Oxford, see Preface.

B. M. Wt. 1·5

1. A coin from the Montagu Collection lately acquired by the British Museum. It was illustrated in the Montagu Sale Catalogue. I have made some remarks upon it in the Preface.

EADWIG

A. D. 955—A. D. 959.

NONE.

The absence of pennies in this and the two preceding reigns is remarkable. It can hardly be attributed to any check in the national progress, and no doubt the discovery of hoards in the future will help to complete our series. It is, however, not impossible that there may have been a cessation of the working of the Oxford Mint during this period.

EADGAR

King of Mercia A.D. 957; of all England A.D. 959; Died
A.D. 975.

B. M. Type III.

OBV. Small cross pattée. Around, inscription between two
circles.

REV. Small cross pattée. Around, inscription between two
circles.

See PL. II, 1-2.

Moneyers:—

1. ÆDELFIN.

2. LEOSIGE.

1. OBV. + EADGARREXANGLORVM

REV. + ÆDELFINEMONETAOXNA

PL. II, 1. P. W. P. Carlyon-Britton.

2. OBV. + EADGĀRREXANGLORV

REV. + LEOSIGEMONETAOXNA

PL. II, 2. C. L. Stainer.

B. M. Type VI.

OBV. Bust 1., diademed. Around, inscription between two
circles.

REV. Small cross pattée. Around, inscription between two
circles.

See PL. II, 3-5.

Moneyers:—

1. ÆDELFIN.

2. FVLFRED.

EADWEARD II

A.D. 975—A.D. 979.

B. M. Type I.

OBV. Bust l., diademed. Around, inscription between two circles.

REV. Small cross pattée. Around, inscription between two circles.

See PL. II, 1-2.

Moneyer:—

1. FVLFRED.1. OBV. + EADPEARDREXANGI⊙REV. + FVLFREDM⊙NOˆXA

PL. II, 1.

Hunter Coll., Glasgow.

2. OBV. + EADPEARDREXANGI⊙REV. + FVLFREDM⊙NOˆXA

PL. II, 2.

Hunter Coll., Glasgow.

Others of this reign appear to exist, but I have not been able to trace them. On the rev. the letter M is like H. These coins, owing to the ending of the obverse legend and their curious appearance, are not above suspicion. Compare with B. M. Catalogue.

ÆTHELRÆD II

Succ. A.D. 979; Dep. A.D. 1013; Rest. A.D. 1014; Died
A.D. 1016.

B. M. Type I; Hild. Type A.

OBV. Bust l., diademed. Around, inscription between two circles.

REV. Small cross pattée. Around, inscription between two circles.

See PL. III, 1-4.

Moneyers:—

1. ALFFOLD.
2. ÆÐELMÆR.
3. ÆÐELRIC.
4. BRIHTFINE.
5. COLEMAN.
6. LEOFMAN.

I. OBV. + ÆÐEL · REDREXΛNG
REV. + ÆLFƿOL · DONOXNΛ

Stockholm, 3241. Wt. 1.770

1. With the exception of the three pennies of Eadgar all the pennies in the National Collection at Stockholm belong to this and the four succeeding reigns: they end with Type V in the reign of Edward the Confessor. Having been found in hoards they are mostly in very fine condition. The author went over in 1902 to describe and weigh them. The numbers refer to *Anglosachsiska Mynt i Svenska Kongliga Myntkabinettet*, Stockholm, 1881: by Bror Emil Hildebrand. Owing to the constant additions the numbers are useful only for reference to that work. *Hild. Type &c.* at the head of this and other pages refers to the arrangement of types in the same book.

13. The author has left the pennies of this type in their usual position. It should be noticed, however, that five of the moneyers' names are to be found on the last type of this reign (Type VIII), and the first current type of Cnut (Type VIII). This seems to show that the issue was made for the most part at the end of Æthelred's reign, but of course there might have been another at the beginning.

B. M. Type II, var. a ; Hild. Type B 1.

OBV. Bust r., diademed. Around, inscription between two circles.

REV. Hand of Providence, issuing from clouds, between $\bar{\lambda}$ and $\bar{\omega}$. Around, inscription between two circles.

See PL. III, 5.

CNVT

A.D. 1016—A.D. 1035.

B. M. Type II ; Hild. Type B.

OBV. Bust to l. Around, inscription divided by bust : outer circle.

REV. Long cross voided, each limb terminating in three crescents and dividing legend ; pellet in centre : outer circle.

See PL. VI, 14.

Moneyers :—

1. PVLFPINE.

1. OBV. + CNVTREXANGLO

REV. + PV LFP I NEMO NOX

PL. VI, 14. Stockholm, 3050. Wt. 1.239

Another interesting penny of the same type reads :—

OBV. XZIHTRIC · CNVT[D/ÆL]

REV. XPVL FPINE M^o⊙⊙ NOXN

PL. VI, 15. Stockholm, 94. Wt. 1.425

1. The only Oxford penny of this type that the author has seen or heard of. The second is no doubt a Dublin penny, but is sufficiently interesting to be included in the series. The obverse legend is rather blurred at the end, and on the reverse the letter N is H as in some of the early pennies. The weight is heavy.

B. M. Type VIII; Hild. Type E.

OBV. Bust l., crowned, within quatrefoil, with or without pellet on each cusp. Around, inscription: outer circle.

REV. On quatrefoil, with pellet at apex of each cusp, long cross voided, each limb ending in three crescents and dividing legend; pellet in centre. Around, inscription: outer circle.

See PL. V, 1-4.

1. But for their weight these pennies might at first sight be mistaken for half-pennies owing to their small size.

B. M. Type II, var. b.

OBV. The same as the preceding type ; but in front of bust, sceptre.

REV. The same as preceding type.

Moneyer:—

1. LEOFPINE.

-
1. OBV. + EDPE RE[·C]
REV. + LEOFPINEOXE
B. M. 113. Wt. 1·088

1. This penny is drawn on p. 420, Vol. II of the B. M. Catalogue of English Coins. It is difficult to account for the

appearance of this isolated piece. There are no others in the B. M. Collection, nor at Stockholm, so that it can hardly belong to a general issue. Perhaps the sceptre is an error on the part of the die engraver, in which case the penny really belongs to the preceding type.

B. M. Type III ; Hild. Type C.

OBV. Bust I., diademed ; in front, sceptre. Around, inscription divided by bust : outer circle.

REV. Over short cross voided, quadrilateral ornament with three pellets at each angle and one in centre. Around, inscription between two circles.

See PL. VIII, 7-9.

A. D. 1066—A. D. 1087.

Type I; Hawkins 233.

OBV. Bust l., wearing crown; in front, sceptre. Around, inscription divided by bust: outer circle.

REV. Cross, each limb ending in three loops, pierced by annulet enclosing pellet. Around, inscription between two circles.

See PL. XI, 1.

Moneyer:—

I. HEREGOD.

1. OBV. + PILLEMVSREXI

REV. + HEREGODONOXEN

PL. XI, 1.

Sir J. Evans.

Known as the 'Harold' type. The cross on rev. is called flory by some. The British Museum Catalogue concludes with the reign of Harold II, so for convenience reference is now made to the Type numbers in *The Silver Coins of England*, by Edward Hawkins.

Type II; Hawkins 234.

OBV. Bust facing, wearing wide crown. Around, inscription divided by bust: outer circle.

REV. Short cross voided, pierced by annulet enclosing pellet, each limb ending in pellet and two crescents; pyramid, ending in pellet, springing from each angle in centre. Around, inscription between two circles.

See PL. XI, 2-5.

5. OBV. + PILLEMVSREXN
REV. + PVLFP1O11OXE11
PL. XI, 5. B. M. Wt. 1·217

Known as the 'Bonnet' type. Mr. P. W. P. Carlyon-Britton's list in Spink's *Numismatic Circular* gives Heregod as a moneyer of this type, HEREGOD ON OXENE. There is an interesting article by the same author 'On the coins of William I and II, and the sequence of the types' in the *Numismatic Chronicle*, Fourth series, No. 7, from which the descriptive names of each type will be given in these notes.

Type III ; Hawkins 236.

OBV. Bust facing, wearing crown, within a portal. Around inscription, divided by portal and bust: outer circle.

REV. Cross, with limbs curving inwards from head to head and ending in a trefoil of three loops, largely pierced; annulet in centre. Around, inscription between two circles.

See PL. XI, 6-7.

Known as the '2 sceptres' type.

Type V; Hawkins 238.

OBV. Bust facing, crowned, between two stars. Around, inscription between two circles.

REV. Cross *bottonnée*, pierced by annulet; in the angles are the heads of a second cross, the limbs curving inwards from head to head and ending in pellet.

See PL. XI, 12.

Moneyer:—

I. GODPINE.

I. OBV. + PILLEMREXANI

REV. + GODPINEONXSNE

PL. XI, 12.

P. W. P. Carlyon-Britton.

Known as the 'first 2 stars' type. The second cross on rev. is often called a quadrilateral ornament and has appeared on previous types: ancient stone crosses occur in this form however. The cross here is merely turned round so that the heads rest in the four spaces left by the first one.

Type VI; Hawkins 239.

OBV. Bust r., crowned, holding sceptre in front. Around, inscription between two circles divided by bust.

REV. Cross *pattée*, pierced by annulet; in each angle, hanging from inner circle, a trefoil of three loops. Around, inscription between two circles.

See PL. XII, 1-2.

PL. XIII, 1.

B. M. Wt. 1.266

The Type number will now follow the arrangement in *A Numismatic History of the reign of Henry I*, by W. J. Andrew, of Cadster, Whaley Bridge. The Hawkins number will also be given. The Oxford pennies of this reign are very scarce. Those of Type XIV, Hawkins 262, have come to light quite recently, so that other types (there are fifteen) may yet appear from time to time.

Type XIV; Hawkins 262.

OBV. Bust facing, crowned, with sceptre on left and star on right; three pellets on each side of the face beneath crown. Around, inscription between two circles, divided by bust.

REV. Cross of pellets, star in centre, within pointed quatre-

foil; on each head of which are three annulets, a fleur-de-lis springing from inner circle in each angle. Around, inscription between two circles.

See PL. XIII, 2-3.

4. OBV. + hENRICVS :

REV. + SAG[RI]M : ON : OXE

L. A. Lawrence.

1. This reading is doubtful.

3, 4. These pennies are badly struck and difficult to read. By the kindness of the owners I was able to obtain casts of both of them.

STEPHEN

A. D. 1135—A. D. 1154.

Hawkins 268.

OBV. Bust facing, wearing crown, sceptre on left. Around, inscription divided by bust : outer circle.

REV. Short cross voided, each limb ending in pellet ; in angles, fleurs-de-lis springing from inner circle. Around, inscription between two circles.

See PL. XIII, 1.

Moneyer :—

1. [PALTER].

1. OBV. + STIEFNE

REV. + PALTER[TERO]NOXCE

PL. XIII, 1.

B. M.

Very uncertain, but the description of the type and the photograph may prove useful hereafter.

Hawkins 269.

OBV. Bust facing, crowned, sceptre on left. Around, inscription divided by bust : outer circle.

REV. Cross pattée voided, each limb ending in three pellets ; mullet pierced in each angle. Around, inscription between two circles.

Moneyer :—

1. [GIRAN].

1. OBV. + STIEFNE
 REV. + GAHAN : ON[OXE]N

Kindly communicated by Mr. W. J. Andrew, who describes it as a 'not very certain attribution,' and was unable to state where the penny was.

Hawkins 270.

OBV. Bust r., crowned, in front sceptre. Around, inscription between two circles, divided by bust.

REV. Cross moline, the heads meeting on either side and becoming flory inwards. Around, inscription between two circles.

See PL. XIII, 2-3.

Montagu Collection.

Another penny in the Montagu Sale Catalogue is described as, *Obv.* STIEFN. *Rev.* + SPETIN[] ON OX. Another in the B. M. Collection seems to be the same as No. 6, and is illustrated, PL. XIII, 2. The name of the moneyer of No. 3 may be Raulf, that of No. 8 possibly Hargod, Halegod or even Ailnoth. If No. 9 is correctly described in the Catalogue, his name might be Snelig, otherwise Sneling, a local name. Nos. 1, 2, 4, 5, 6, 7 were kindly communicated to me by Mr. W. J. Andrew, who was unable to say, however, where the pennies were.

MATILDA

A.D. 1141—A.D. 1142.

Type, the same as Stephen, Hawkins 270.

See PL. XIII, 1.

Moneyer:—

1. SVET[ING].

1. OBV. + · · TILDI : IM · ·

REV. + SVET · · : ON : OX :

PL. XIII, 1.

The date assigned is A.D. 1208-1216.

Short-Cross Pennies, Class IV.

Henry and Miles are mentioned in some lists as moneyers of this type, which is similar to the previous one, but there are three curls on each side of the face. The date assigned is A. D. 1216-1222.

Short-Cross Pennies, Class V.

OBV. Similar to the previous type, with three curls on each side of face. Workmanship poorer; the head placed much lower down.

REV. As before.

See PL. XIV, 10.

Moneyer:—

I. hÆLIS.

I. OBV. hÆNRIQVSR ÆX

REV. + hÆLISON·OXÆNÆ

PL. XIV, 10.

B. M. Wt. 1.392

The date assigned is A.D. 1222-1248.

The short-cross coinage was issued by Henry II, Richard I, John and Henry III, all the coins bearing the name of Henricus. For the classification, first suggested by Sir J. Evans, see his paper in the *Numismatic Chronicle*, 1865; and also a paper on *A find of Silver Coins at Colchester*, by H. A. Grueber in the *Numismatic Chronicle*.

HENRY III

A.D. 1248—A.D. 1272.

OBV. Head facing, crowned. Around, inscription between two circles, divided by hand which holds sceptre on left.

REV. Long cross voided, pellet in centre, each limb ending in two pellets; three pellets in each angle. Around, inscription between two circles, divided by cross.

Moneyer:—

 Henricus Simeonis and Willelmus Sarsorius.

ADDITIONAL NOTES

Æthelstan, B. M. Type V, page 1. Messrs. Spink's *Numismatic Circular*, 1893, has:—

OBV. + ÆDELSTANREXTOBRIȚ

REV. + ꝛÐELMVIID M̄O OXVR

From the description, this penny evidently had a cross of four pellets on the field of the obverse. This moneyer's name appears in the two succeeding reigns.

Cnut, B. M. Type VIII, page 28. B. M. 480 seems to be the same as no. 28.

When the bust on the obverse is described as 'dividing the legend' and no such division is shown in the text, the reader will understand that the legend begins on the left side of the bust and ends on the right side. The description is more convenient than accurate.

WORKS IN ACTIVE PREPARATION.

The Flemings in Oxford. Vol. II.

Hearne's Collections [as No. 2 above]. Vol. VII.

A History of University College. By the Rev. the MASTER.

The Cartulary of Oseney Abbey. Edited by the Rev. H. E. SALTER.

The Cartulary of Eynsham. Edited by the Rev. H. E. SALTER.

A full description of the Society's work and objects can be obtained by application to any of the Committee residing at Oxford—ROBERT S. RAIT, Esq., New College (*Hon. Treasurer*); FALCONER MADAN, Esq., 94 Banbury Road; the Rev. the PROVOST OF QUEEN'S COLLEGE (DR. MAGRATH); the Rev. H. RASHDALL, New College; and Dr. SHADWELL, Frewin Hall, Oxford. The annual subscription is one guinea, and the published volumes as a set can be obtained by new members at one-fourth the published price (i.e. 10s. 8d. a year). Life Composition for new members (not being Institutions) is twelve guineas: after five years of subscription it is ten guineas; after ten years, eight; after fifteen, six; after twenty, four. The Society counts compositions among its liabilities (in case it ceased its work), deducting one guinea a year from each sum paid as composition, from the date of effecting it.
